Mr. Jyram Sharma Curriculum Vitae

Skills

- Can code fluently in Java, Python and HTML
- Solid foundation in Object-Oriented Programming
- Experience in using a variety of API's
- Enjoy working in a team with an objective
- Can effectively communicate with others
- Self-initiative

Experience

Cyber Security Intern, Injazat Data Systems, Abu Dhabi, UAE - June 2019
Here I learned about the technicalities that go into running a data center, specifically the security side. I spent my time with workplace operations (WPO), information security (InfoSec) and the security operations center (SOC). I learned how to communicate with vendors and customers to satisfy both Injazat and their customer's needs. My major learnings were that no matter your role in a team/organisation, if you do not complete your tasks you will hinder the success of the entire objective, so being a team player is critical to success.

Jacobs Hack hackathon (won 'most disruptive' project) - November 2018
Our team created an Android app built primarily using Android Studio with backend and API support from Google Cloud Platform. The app found the safest route between two places using crime states provided by the UK Police API (data.police.uk). Throughout this project, I learned delegation, time management and teamwork skills as we had many tasks to complete within 24 hours.

Financial Markets Signalling Business - August 2015
After winning a stock market simulation game during my secondary education, I became interested in trading and so I decided to dabble with real money. After a few months of

trading, I was at a loss. To limit my losses I decided to create a financial service signaling business where I arbitrarily hired freelance analysts to supply their market forecasts and then I would provide this data to my private member's group I had built using social media. At its peak, the business had over 100 paying monthly customers. This experience taught me the importance of having good relationships with your customers, working hard under pressure and managing my time.

Global Markets Intern, National Bank of Abu Dhabi (Now First Abu Dhabi Bank), UAE - June 2015
I shadowed members of the global markets team at one of the largest banks in the GCC, National Bank of Abu Dhabi. Here I learned how teamwork and communication within a workplace is key to how any business can be deemed successful, no matter how much technology and automation is present.

Education

Undergraduate degree studies: In my first year reading Computer Science (BSc) at Brunel University London, UK.

Secondary school: British School Al Khubairat, Abu Dhabi, United Arab Emirates

    A-Levels:
- AAAC in Math, Economics, EPQ and Computer Science respectively

Independent Courses:

- CS50 Harvard University
- The New Boston Java intermediate course
- Programming Knowledge Java course
- AWS Cloud Computing
